

A Cartesian coordinate system is shown with a horizontal x-axis and a vertical y-axis intersecting at the origin. A point is plotted in the third quadrant. Dashed blue lines extend from this point to the negative x-axis and the negative y-axis. The coordinates of the point are labeled as $(-\frac{5}{2}\sqrt{3}, -\frac{5}{2})$.

$$\left(-\frac{5}{2}\sqrt{3}, -\frac{5}{2}\right)$$
